Description

The department is looking for reinforcement to increase its impact in transversal initiatives. Focus areas include: cloud architecture evolutions, obsolescence management, API governance, data product adoption, and continuous updates of IT architecture principles and standards. The goal is to strengthen architecture credibility, scope, and strategic alignment.

Responsibilities

- Driving and coordinating IT architecture governance (principles, guidelines, standards)
- Contributing to target architecture definition and its implementation roadmap
- Supporting cloud and infrastructure transformation programs
- Preparing architecture views and decision papers for transversal steering boards
- Performing architecture assessments and impact analyses across the IT landscape
- Defining and monitoring action plans on complex topics (requirements clarification, coordination of architects and contributors, follow-up to closure)
- Gathering inputs from enterprise and solution architects, IT strategists, product owners, and SMEs to produce executive-level architecture deliverables (presentations, dashboards, recommendations)
- Maintaining up-to-date views of the IT architecture portfolio aligned with budget and priorities

Experience

- Proven track record in defining and enforcing architecture governance (principles, standards, guidelines).
- Hands-on experience with target architecture design and roadmap implementation across multiple domains (applications, data, infrastructure, cloud).
- Experience in cloud and infrastructure transformation programs (migration, hybrid/multi-cloud strategies, security, cost optimization).
